"PROBIOTIC STRAIN LACTOBACILLUS PLANTARUM 299V INCREASES IRON ABSORPTION FROM AN IRON SUPPLEMENT PEARL MILLET BY USING ALBINO WISTAR RATS"

Abstract

Iron deficiency is common, especially among young children and women. Adding probiotics to foods could be one way to increase iron absorption and increasing the bioavailability of iron in blood in presence of vitamin C. The aim of the study was to test the hypothesis that non heme iron absorption from a pearl millet (iron rich supplemented food) is improved by adding lactobacillus plantarum 299v. Iron absorption was studied in female wistar rats. Iron absorption of pearl millet containing 1010 colony forming units Lp299v was compared with that from a control without Lp299v. Mean absorbance value from the pearl millet seeds containing 1010 colony forming units (1.02nm) was significantly higher than the control without probiotics (1.01nm). In conclusion intake of probiotics can increase iron absorption by approximately by from a pearl millet having an already relatively high iron bioavailability. Statistical analysis was performed by using Graph pad prism version 6.0. The p values are calculated by using Turkey's multiple comparison test, and the values are significant with p value is < 0.05
