TITLE: BER analysis of ZF receiver with imperfect CSI for fully correlated channel

AUTHORS: EDURU, SUPRAJA; Rangaswamy, Nakkeeran

Charotar University of Science & Technology Mail - International Journal of Electronics Letters - Invitation to Review Manuscript ID TETL-2020-0060

ABSTRACT: In this paper, the Error Rate performance of the Zero-Forcing (ZF) receiver with imperfect Channel State Information (CSI) under correlated Rayleigh fading channel is investigated. Accounting the error in channel estimation, a mathematical expression for the post-detection Signal to Noise Ratio (SNR) of the substream is derived under correlated Rayleigh fading channel. Later, the average BER of the ZF receiver is determined from the derived post-detection SNR of the substreams. Furthermore, the BER performance with different system parameters is validated and demonstrated through Monte-Carlo simulations. From the simulation results, it is observed that with imperfect CSI, BER of ZF receiver with full spatial and receiver correlation converges to the BER with transmitter correlation and uncorrelated BER, respectively. Further, it is also observed that the rate at which the BER of ZF receiver with full spatial correlation converges to the BER with transmitter correlation varies with respect to the correlation coefficient (ρ_t, ρ_r) and Mean Square estimation Error ($[\sigma_\varepsilon]^2$).

Dear Mr. Patel,

In view of your expertise I would be very grateful if you could review the following manuscript which has been submitted to Journal of The Institution of Engineers (India): Series B.

Manuscript Number: IEIB-D-19-00035

Title: Channel Analysis for an Indoor Massive MIMO mm-wave System

Abstract: Massive Multiple Input and Multiple Output (MIMO) is one of the key technologies in upcoming wireless communication for spatial diversity among multiple users. Massive MIMO operating with mm-wave frequencies suffers from higher attenuations. With higher frequencies, the beam of the channel becomes narrower. This affects the signal with severe degradations. By the presence of obstacles in the propagation paths, the signals receiving at the receiver are fluctuating. This makes the signal to lose its strength. To analyze the channels, parameters such as path loss, power delay profile (PDP), RMS (Root Mean Square) delay spread and Mean excess delay between the users are analyzed. A distributed massive MIMO network is considered for the propagation path between the remote radio head and the mobile user. Results show that performance of the channel conditions for the above parameters are investigated for Line of Sight (LoS) and Non Line of Sight (NLoS) conditions.

Dear Kartik,

It is our distinct pleasure to congratulate you on your elevation to IEEE Senior member. Realization of this grade requires extensive experience and reflects professional maturity and documented achievements of significance. Only 14% of IEEE Power & Energy Society members and only 11% of IEEE members have the distinction of being a Senior member.

IEEE members that have attained Senior Membership are much more likely to be committed to IEEE and the societies they represent. We hope this recognition re-energizes your commitment to the Power & Energy Society, and look forward to continuing to be your preferred source for professional development.

Again, congratulations on achieving this significant milestone.

Dear Professor Savalia:

We are writing to invite you to become a reviewer for Mathematical Reviews. As you probably know, the MR Database, presented in MathSciNet, covers the world of published research literature in mathematics by means of post-publication reviews written by subject experts. For over 75 years, MR has been assisted in its mission by mathematical scientists throughout the world who have thoughtfully provided perspective on the published literature.

The collective work of these reviewers represents a permanent contribution to the community and plays a vital role in ongoing developments in mathematical science.

The literature is growing rapidly, and in order to continue coverage we need additional reviewers to keep up with this growth and to speed up the reviewing process. Based on your published work, we believe that your qualifications and research interests are very much the kind we need. We would be very pleased to be able to call on you to review for us.

If you are interested and have the time for reviewing, please complete the New Reviewer Information form at <https://mathscinet.ams.org/mresubs/0135G>. The information that you provide will allow our editors to assign you appropriate items to review. Upon receiving your completed form we will process the information, which takes an average of 2 weeks. Once your information has been processed you will receive a Welcome Letter and will then begin to receive items for review. For more information about service as a reviewer, see the Guide for Reviewers at <http://www.ams.org/mresubs/guide-reviewers.html>.

It is our hope that you will choose to join us in this important enterprise. We look forward to hearing from you.

Yours sincerely,
